Virology 184:227-234(1991).
-!- FUNCTION: PROBABLE COMPONENT OF THE ACTIVE POLYMERASE. IT MAY
-!- FUNCTION IN MENA SYNTHESIS, CAPPING, METHYLATION AND POLY(A)
SYNTHESIS OF NEWLY SYNTHESIZED VIRAL MRNAS, RNA EDITING OF THE P
GENE TRANSCRIPT, AND PROTEIN KINASE ACTIVITY.
-!- MISCELLAMEDUS: THEY ARE FOUND IN CAPALYTIC AMOUNTS (APPROXIMATELY
20 TO 30 COPIES PER SEMIAI VIRION) IN VIRAL NUCLEOCAFSIDS.
-!- SIMILARITY: WITH L PROTEIN OF OTHER PARAMYXOVIRUSES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ď

* sequencing reads that have not been assembled into

* contigs. Runs of N are used to separate the reads

* and the order in which they appear is completely

* arbitrary. Low pass sequence sampling is useful for

* identifying clones that may be gene-rich and allows

* overlap relationships among clones to be deduced.

* However, it should not be assumed that this clone

* will be sequenced to completion. In the event that

* the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   contig of 847 bp in length gap of unknown length contig of 941 bp in length gap of unknown length gap of unknown length gap of unknown length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Details of the omitted CDS are available on request. The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous. The length in codons and the calculated codon adaptation index (CAI) is given for each CDS.

Cosmid 9571 overlapped at 5′ end by cosmid 8337, EMBL entry SC8337, accession no. 246659, and at the 3′ end by cosmid 8270, EMBL entry SC8270, accession no.448613.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 All CDS over 100 codons have been analysed. CDS that are completely overlapped and those that are overlapped by more than 50\% of their length by a larger CDS have been omitted from this

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  URL, http://www.sanger.ac.uk/Projects/S_pombe/)
Protein coding regions (CDS) have been predicted with the help of protein coding regions (CDS) have been predicted with the help of computer analysis using the Genefinder program in PomBase (an ACEDB database) with additional predictions for the branch-acceptor sites supplied by the program Sp3splice. CATTION: It is possible that for any individual CDS we may have underestimated or overestimated the number of introns/exons or we may not have chosen the correct splice donor/acceptor sites. CDS are numbered using the following system as SPATHIO.10: SP (S. pombe), A (chromosome 1), cSHIO (cosmid name), .01 (first CDS), c (complementary strand). The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous. The length in codons is given for each CDS.
IMPORTANT: This sequence MAY NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlapp between neighbouring submissions. Cosmid c9G1

A computer readable medium has been developed which has recorded on it 982 nucleotide sequences isolated from the Enterococcus faecalis genome. X12938 to X13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring

New chitinase enzyme and coding sequence - cleaves beta-1,4-glycoside bond of chitin but has no beta-N-acetylhexosaminidase activity claim 11: Page 21-23: 66pp; Japanese.

The sequences given in Q56756-61 encode chitinase derivatives which cleave the beta-1,4-glycoside bond of chitin but have substantially no beta-N-acetylhexosaminidase activity. These sequences may be introduced into yeast and cultured for the production of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (HUMA.) used to
progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 8: Page 48: 105pp; English.

The promoter (733641) of the arabinofuranosidase gene of Aspergillus niger 3M43 was identified in a full-length gene (733646) isolated from a genomic DNA library. The promoter is strongly repressed by glucose and induced by intermediates of xylose metabolism. It can be used to control the expression of a gene of interest, e.g. A. niger arabinofuranosidase or a heterologous gene, in a host sequence 869 BP; 224 A; 209 C; 193 G; 243 T;

The Aspergillus niger 3M43 arabinofuranosidase gene (T33646) codes for the precursor form (W00810) of the arabinofuranosidase enzyme. It was isolated from a genomic DNA library by screening with a PCR clone obtd. by amplification of A. niger DNA using primers (see also T33644-45) based on an isolated peptide (W00806) the enzyme. The mature enzyme coding sequence (see also T33640) can be used for prodn. of arabinofuranosidase (W04167) in transformed hosts, pref. Aspergillus or a transgenic plant. The promoter (see also T33641) therminator (T33642) may also be used to control expression of the arabinofuranosidase gene, or other gene of interest, in a host
Aspergillus arabinofuranosidase gene.

Claim 1: Page 1239-1244; 2084pp; English.
A computer readable medium has been developed which has recorded on it
Computer readable medium has been developed which has recorded on it
X12938 to X13919 represent these nucleotide sequences which are primary
nucleotide sequences, also known as configs. The computer based system
can identify fragments of the Enterococcus faecalis genome with
commercial importance. The products can be used to detect the presence
of Enterococcus faecalis in samples. They can also be used for
diagnosing Enterococcal infection in an animal and monitoring
progression of disease, and for identifying agents which can be used to
modulate the growth or pathogenicity of Enterococcus faecalis, or
another related organism, in vivo or in vitro. In particular the
polypeptides encoded by the Enterococcus faecalis nucleotide sequences
can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            vaccines, drug screening, etc.

Claim 5; Page 156; 354pp; English.

X30724 to X30946 represent genomic DNA sequences isolated from
Streptococcus pneumoniae strain 0100993. These genomic DNA sequences
encode the novel proteins given in Y11114 to Y11367. The proteins,
isolated from Streptococcus pneumoniae, can be used in vaccines against
streptococcul infections and in assays for identifying compounds that
inhibit or activate the activity of the proteins. The antagonists can
be used to treat an individual having need to inhibit a bacterial
protein. Vectors expressing the proteins can be used to induce a
protective immune response in mammals.
Sequence 593 BP; 206 A; 76 C; 117 G; 194 T;
New isolated Enterococcus faecalis polynucleotides and polypeptides - used to develop products for the detection of Enterococcus and for use in vaccines for prevention or attenuation of Enterococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Streptococcus pneumoniae genomic DNA sequence SEQ ID NO:169. Streptococcus pneumoniae polynucleotides - useful for developing products for diagnosis, prevention and treatment of infections e.g. pneumonia, bacteremia, meningitis or endocarditis Claim 1, Page 55; 181pp; English.

The sequence is that of a Streptococcal polypeptide coding region. The polypeptide can potentially be used for the diagnosis and prevention of bacterial infections, especially SP infection. It may be used for the treatment of diseases such as otitis media. conjunctivitis, pneumonia, bacteremia, meningitis, sinusitis, pleural empyema, endocarditis or infection of the cerebrospinal filid. Sequence 1975 BP: 517 A; 524 C; 379 G; 555 T;

This sequence represents the novel cgkA gene from the microorganism cytophaga drobachlensis the novel cgkA gene from the microorganism.

The sequence was isolated from a C. drobachlensis genomic library based on growth activity on medium containing carrageenan. From the screens of the library, 5 final positive clones were isolated, each contained the present sequence as an insert. The enzyme acts on kappa-carrageenans (polymers of Deglactose libred by beta(1-4) and alpha(1-3) glycosidic linkages and having 1 ester-sulphate groups per disaccharide unit) to produce oligo-carrageenans. The invention relates to the isolation of genes coding for glycosyl Mydrolases, which, when subjected to hydrophobic cluster analysis (WcA) together with Alteromonas carrageenovar kappa-carrageenase, give an HCA score of at least 75% in the domain between positions 17 and 262 of the kappa-carrageenase amino cald sequence. The enzymes can be used to convert carrageenase amino acid sequence. The enzymes can be used to convert carrageenase amino acid sequence. The enzymes can be used to convert carrageenase to sulphated oligocarrageenans which are immunomodulators, antiviral agents and growth factor binding antagonists. Oligocarrageenans to contractile power and adhesion, growth and protein synthesis in human call cultures, and elicit enzyme markers of growth or phenolic defence metabolism in plants. 874 A; 541 C; 522 G; 653 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           01-SEP-1998 (first entry)

DNA encoding 2 Staphylococcus aureus proteins of unknown function.
DNA encoding 2 Staphylococcus aureus protein; immune response induction; eye infection; antibody production; T-cell immune response; gastrointestinal infection; respiratory infection; inhibitor; bacterial infection; cardiac infection; central nervous system; kidney infection; uninary tract infection; antimicrobial compound identification; broad spectrum antibiotic;
vaccine; Staphylococcal infection; food poisoning; scaled skin syndrome; toxic shock syndrome; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              authors interprise the property of the present sequence encodes 3 Staphylococcus aureus proteins of The present sequence encodes 3 Staphylococcus aureus protein, that, based on homology with a known Staphylococcus aureus protein, is believed to be an autolysin (EC 3.5.1.28) (N-acetylmuramoy1-L-alanine amidase).

The present sequence was obtained from a library of clones of S. aureus WCUH 29 in Escherichia coli. The DNA sequence can be used in the construction of ribozymes and antisense sequences to control the expression of Staphylococcal genes. The DNA sequence is also useful as a source of regulatory elements for the control of bacterial gene expression. The encoded protein may be used to produce vaccines to enable a host to produce specific antibodies with antibacterial action. These vaccines and antibodies would protect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  nseq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             a host against invasion by S. aureus, and conditions relating to Staphylococcal infection, e.g. Staphylococcal food poisoning, scaled skin syndrome, and toxic shock syndrome.

produce polypeptides or fragments. The proteins are used in the treatment of disease, for inducing an immune response by administering them, to produce antibody and/or T-cell immune response. Antagonists of the proteins are used for the inhibition of bacterial polypeptides. Conditions which may be treated include bacterial infections, especially respiratory, cardiac, gastrointestinal, central nervous, kidney, urinary tract, skin, bones and joints. The proteins can also be used to identify antimicrobial compounds which are broad spectrum antibiotics, especially useful in the treatment of H. splori infection sequence 3110 Bp; 1111 A; 488 C; 6/6 G; 832 T;

claim i; Page 214-216; 390pp; English.
This sequence encodes 2 Staphylococcus aureus proteins of unknown
function, and represents a DNA Sequence of the invention.
The DNA sequences were isolated from Staphylococcus aureus WCHU29
(NCIMB 4071), Host cells containing the DNA sequences are used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Streptococcus pneumoniae genome fragment SEQ ID NO:176.

Claim 1; Page 1108-1110; 1409pp; English.

The present invention describes a computer readable medium which has the present invention describes a computer readable medium which has conclective sequences SEO ID No:1 to 391 (V52134 to V52524) recorded to SEQ ID No: 1 to 391. The nucleotide sequences depicted in SEQ ID No: 1 to 391. The nucleotide sequences depicted in SEQ ID No: 1 to 391. The nucleotide sequences depicted in SEQ ID No: 1 to 391. The nucleotide sequences depicted in SEQ ID No: 1 to 391. The nucleotide of any of the fragments of the S: pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S: pneumoniae genome (SED ID NO: 1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genome (DA library using as a probe a target sequence defined by any of the sequences in SEO ID NO: 1 to 391, identifying members of the library which contain sequences that hybridise to the target sequence and isolating ment of the sequence of isolating members; or (b) isolating ments derived from the cramputer based system for identifying fragments of the S: pneumoniae genome to prime the amplification and isolating the amplified sequences. The computer readable medium can be used in diagnosis kits and assays, and pharmaceutical compositions and vaccines for S: pneumoniae genome. Products from the present computence is solations for S: pneumoniae genome. Products from the present compositions and vaccines for S: pneumoniae genome. Products from the present compositions and vaccines for S: pneumoniae genome. Solucine to Sequence S: 2124 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 26; Page 40-42; 84pp; English.

This nucleotide sequence comprises novel human tumour rejection antigen precursor (TRAP) MAGE-C1 CDNA (see also V69720). MAGE-C1 is a novel member of the MAGE family that may be recognised by cytotoxic T cells, leading to lysis of the tumour cells which express it. MACE-C1 and MACE-C2 (see W81546-47) are expressed in a variety of tumours and in normal testis cells, but not by other normal cells. The MAGE-C1 CDNA was isolated from a melanoma LB373-MEL cDNA library using a probe generated from LB-373-MEL RA by PCR (see V69728-29). It shows homology to MAGE-A1 cDNA (see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Tumour rejection antigen precursors - used for determining presence
of cytolytic T cells specific for complexes of a human leukocyte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1214 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         01-MAR-1999 (first entry)
Tumour rejection antigen precursor MAGE-C1 cDNA.
MAGE-C1; humour rejection antigen precursor; TRAP;
therapy; diagnosis; ds.

WACE-C1 gene was localised to chromosome region Xq26-q27. MACE-C1 and MACE-C2 consists (see V69726) are claimed, as are: expression and MACE-C2 consists (see V69726) are claimed, as are: expression vectors; transformed or transfected cell lines (e.g. COS and CHO); an isolated TRAP encoded by the cDNAs; a kit useful in a PCR based assay comprising an oligonuclectide having a sequence of nuclectides 18-34 of the 4031 bp MACE-C1 CDNA and an oligonuclectide having a sequence which is complementary to nuclectides 200-217 of having a sequence; a method for determining expression of a MACE-C1 gene using the kit; a polytope comprising a number of tumour rejection antigens derived from MAGE-C1 or MAGE-C2 and at least one tumour rejection antigen derived from MAGE-C1 or MAGE-C2 and at least one tumour rejection antigen derived from MAGE-C1 or MAGE-C2 and at least one tumour rejection antigen derived comprising an expectation antigen. MACE-C2 and at least one other tumour rejection antigen (HLA).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This nuclectide sequence concides movel human tumour rejection antigen precursor (TRAP) MAGE-C1 (see W81546). MAGE-C1 is a novel member of the MAGE family that may be recognised by cytotoxic T cells, leading to lysis of the tumour cells which express it.

MACE-C1 and MACE-C2 (see W81547) are expressed in a variety of tumours and in normal testis cells, but not by other normal cells. The MAGE-C1 cDNA was isolated from a melanoma LB373-MEL CDNA by CR amplification (see V69732-33). It shows homology to MAGE-A1 cDNA (see V69719). The MACE-C1 gene was localised to MAGE-A2.

MACE-C1 and MACE-C2 cDNAs (see V69726) are claimed, as are: capman weetcors; transformed or transfected cell lines (e.g. COS and CHO); an isolated TRAP encoded by the CDNAs; a kit useful in a method for determining expression of a MACE-C1 cen was localized to determining expression of a MACE-C1 cen using the kit; a polytope comprising a number of tumour rejection antigens derived from MAGE-C1 or MAGE-C2; and a polytope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Tumour rejection antigen precursors - used for determining presence
of cytolytic I cells specific for complexes of a human leukocyte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (e.g. cos
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                01-MAR-1999 (first entry)
Tumour rejection antigen precursor MAGE-C1 cDNA.
MAGE-C1; human; tumour rejection antigen precursor; TRAP;
therapy; diagnosis; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Length: 13

Staphylococcus aureus contig SEO ID #20.
Computer readable medium; vaccihe; S.aureus infection; immunodetection;
cellulitis; eyelid infection; food poisoning; osteomyelitis; therapy;
skin infection; surgical wound infection; scalded skin syndrome;
toxic shock syndrome; ds.
comprising at least one tumour rejection antigen derived from MAGE-C1 or MAGE-C2 and at least one other tumour rejection antigen. MACE-C1 and MACE-C2 can be used in a method for determining the presence of cytolytic T cells specific for complexes of a human leukocyte antigen (HLA).

Tatti-S. aureus vaccines

Tatti-S. aureus vaccines

This sequence represents one of 5191 Staphylococcus aureus DNA sequences

This sequence represents one of 5191 Staphylococcus aureus DNA sequences

of the invention. The DNA sequences are recorded on a computer readable

medium, preferably selected from a floppy or hard disk, random access

menory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using

the S. aureus DNA sequences allows putative functions to be assigned so

that protein-encoding or regulatory regions of commercial, therapeutic or

industrial importance can be obtained "Specifically, sequences which are

likely to encode antigens have been identified and these polypeptides can

be used in a vaccine composition against S. aureus infection. The

collypeptides can also be used in a kitt for the immunodetection of

S. aureus in a sample. S. aureus is implicated in numerous human diseases,

including cellulitis, eyelid infections, food poisoning, osteomyelitis,

skin and surgical wound infections, scalded skin syndrome, toxic shock

syndrome, etc. Organisms transformed with the DNA sequences can be used

for recombinant production of the polypeptides. The new DNA sequences

computer readable medium.
                                                                                                             WPI; 97-374922/35. Polynucleotide(s) and proteins derived from Staphylococcus aureus stored on computer readable medium and used in the production of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 3742 T;
